**Overview**

Vista Medical Research conducts outpatient Phase II through IV clinical trials, post-marketing studies, Rx to over the counter conversion studies and product testing. Vista conducts clinical trials in its own 2,500 square foot facility as well as in various investigator venues. Vista's ethnically diverse staff and physicians network supports minority study patient participation when appropriate.

Professional attention to compliance, accuracy, efficiency, consistency, and ethics underscore our commitment to the successful conduct of simple as well as complex studies. It is our intent to make study participation an efficient and supportive process for sponsor personnel, study patients, investigators and our staff. We rely on this strategy to assure repeat business from our numerous sponsors.

There are a few dedicated research sites in the area, but we are able to service the southeast valley well with our location and our diverse trial experience.

**Studies**

- Antihypertensive
- Antidiabetic
- Antilipidemic
- Arthritic
- Irritable bowel syndrome
- Chronic pain
- Smoking cessation
- Depressive disorders
- Diabetic prevention
- Dry eye syndrome

**Scientists**

- Nicholas Messina III M.D.
- William D. Dachman M.D.
- Dale Adams R.N.
- Deanna Adams R.N.

**Synergistic and Strategic Opportunities**

1. We are not limited to location. We work world wide with numerous pharmaceutical companies
2. We conduct clinical trials and test drugs and other products. We have the capability to explore new compounds, herbal supplements, vitamins, et cetera.
3. We have the expertise to conduct trials to the standards required, knowledgeable staff, and regulatory expertise.
4. We would like to partner with pharmaceuticals, OTC development, product testing, and marketing companies.
